Analysis

Metadata Forensics Report

Risk score: medium

Suspicious fields: timestamps

Missing fields: device_info, encoder, software, comments

Findings:

- [medium] timestamps: Creation and modification timestamps are more than 30 days apart; this is inconsistent.

- [low] device: Device information is missing; provenance cannot be verified from metadata alone.

- [low] encoder: Encoder or software information is missing.

Metadata findings are indicators only and require further investigation.
